

# CHILDREN'S ACADEMY

## CREATING FUTURISTIC YOUNG MINDS

*With a firm belief that children are the future of our planet, and have the ability to transform it in a new and better world, the Children's Academy Group of Schools is enhancing the knowledge of thousands of children by giving them the foundation upon which they can build their future*

**E**stablished on the concept of welcoming new developments in the field of education, the Group is dedicated to provide a progressive learning environment along with the overall development of the students.

### DEVISING NEW METHODS OF LEARNING

With a vision of becoming a world-class institution of excellence in innovative learning, the Group is educating the students by imparting them with the best knowledge in order to move them on the path of success and prosperity.

In a world where things are changing so rapidly, the students need to prepare themselves for every challenge that life throws at them. Hence the Group is keenly devoted to guide the students in such a manner that can make them future ready.

The curriculum of the schools is designed in such a manner so that it can lead to the all-round development of every student. It helps to make the students triumphant in every aspect of their lives be

it academics, arts, sports, entertainment or any other extracurricular activity.

The main purpose behind developing such an empirical curriculum is to create lifelong learners who would not just excel in their schooling lives but also in every other phase of their life.

The focus is to implant within the students such skills that can make them proficient in multiple ways rather than just bookworms.

The Group has identified various skills such as leadership, digital literacy, effective communication, emotional intelligence, entrepreneurship, global citizenship, problem-solving and team work.

The activities carried out at the schools are designed in such a way so that the students can develop all these skills at an early age. The annual days and state darshan are a few of such activities that motivate the students to actively participate from a very young age.

The students are trained to perform on the stage so that they can boost up their confidence level and overcome their stage fright.

### DISTINCTIVE SYSTEM OF EVALUATION

The Children's Academy Group of Schools has a unique system of evaluation of the academic development of a student that includes formative and summative modes. Formative assessments are carried out both formally and informally by the teacher in the course of teaching and are diagnostic or remedial in nature. The subjects assessed under formative assessment are languages, mathematics, science and social studies. On the other hand, the summative assessment is an overall analysis of the student's performance which is done at the end of the term and it serves as a feedback for learning of the students.

The creative curriculum and futuristic assessment techniques have made the Children's Academy one of the top 10 schools in Maharashtra in the Education World Rankings 2018-19. The Group has also won an award for creating a global learning environment at the World Education Summit.

The Group has a mission of creating future-ready citizens and is committed to make a difference in the education sector.
